

Garde Systems Creates a Safer Transport Environment with the BuckleGarde

BOW MAR, CO – 2 Jun 2008: Garde Systems today announced the availability of the BuckleGarde, a new, easy-to-use tool for EMS personnel to help deter patients from removing their safety straps, creating a safer transport environment.

BuckleGarde is a security cover that surrounds the safety buckles used in medical and paramedical transport, deterring the patient from pushing the button and releasing the buckle. Patients have removed their safety straps while ambulances are in motion, causing injury to themselves and medical personnel. The BuckleGarde bridges the gap between verbal restraint and more aggressive restraint methods.
